

NITRO Snowboard Tech

Cores

1. **POWERLITE CORE** **POWERLITE CORE: LIGHTWEIGHT PERFORMANCE AND POP**
The highest grade of ultra-lightweight poplar wood in our Powerlite core makes for the perfect ride with lots of pop and unmatched strength at a minimum weight.
2. **POWERCORE II** **POWERCORE: PERFORMANCE DRIVEN**
Our Powercore uses tip-to-tail poplar wood, providing lightweight strength and the perfect blend of flex, response and feel.
3. **POWERCORE II** **POWER CORE II: ENHANCED PERFORMANCE AND EXTRA STRENGTH**
The Powercore II is a tip-to-tail poplar wood core with additional beech wood stringers for unrivalled strength, smooth response and insane snap.
4.  **KOROYD™ CORE**
The latest in core technology, utilizing co-extruded miniature tubes, vertically aligned and welded, with unique energy absorption properties, Koroyd™ is approximately 70% lighter than standard balsa wood with no loss in strength or flex. This engineered core is utilized in the tip and tail of the new HIGHLANDER model for reduced swing mass and overall weight.

BALLISTIC IMPACT PANEL NITRO exclusive TECH FEATURE

Kevlar® is used in bulletproof vests and body armor to protect your core. We use it in strategic places around the binding-to-board interface to protect the construction from impacts during hard landings.

POWERPODS NITRO exclusive TECH FEATURE

Overlaying a lighter sidecut radius in the center of the board with a larger one towards tip and tail is creating our exclusive POWERPODS which have two amazing effects. On one hand, there is extended board width under the bindings, resulting in additional edge control, especially on hard and icy surfaces as well as simply less toe and heel drag for larger boots and flatter stance angles. On the other hand, our POWERPODS make the board super reactive and fast turning once it's put on edge – while keeping it easy to control if ridden with less dynamics.

RAILKILLER NITRO exclusive TECH FEATURE

Your secret weapon for rails, rocks and longevity! With it's unique edge profile and an impact resistance of more than 200% compared to a standard edge - the Railkiller Edge is twice as thick and twice as strong. This proprietary construction can take on any rail challenge. Take a file to them or ride them hard and wear them down naturally, this chunk of steel has enough meat for years of abuse.

NITRO Snowboard Tech

Cambers / Lines

In today's world there are so many different names, classifications, and marketing schemes out there that are used to hype up the camber design, most of them don't even function in a way that will help people become better snowboarders. We have decided to cut the crap and keep snowboarding simple by simplifying our camber names and technologies to only those that work, and that are approved by our regional and global team riders, and friends. That is why we have chosen to offer the four camber profiles that really work, and we are not overcomplicating things by micro-slicing and renaming them - Even though all of our camber profiles are adjusted to match the type of person or terrain the boards are designed for, but TRUE camber is camber, Gullwing is gullwing, Flat-Out is Flat-Out, and Cam-Out is Cam-Out. Real camber technology that works, and does not need a marketing scheme to prove it.

True Camber:

TRUE Camber is good old standard camber, which provides the stability, and pop many shredders can't live without. The amount of snap and support you get from a cambered board is unrivalled by any other camber design. Our TRUE Camber varies between board models because each board is specifically designed for a certain terrain or type of riding, for example the TRUE Camber in our Pantera SC has a larger height for maximum response, while the TRUE Camber in our freestyle boards are lower to provide you with a more freestyle friendly flex, without losing the support and trust you need for stomping landings. Camber is Camber there is no point in over complicating it!

Cam-Out Camber:

Our Cam-Out Camber is basically a True Camber with early and smooth transitions into Tip and Tail. The result is a fun and responsive board that turns on the spot and is forgiving, even after that 713.5° landing!

Flat Out Rocker

Flat-Out Rocker is a hybrid flat camber profile where the nose and tail lift off before the traditional contact points, providing effortless turns, and catch-free maneuvers. The lifted nose and tail provide excellent float, pressability, and forgiveness in any terrain. The ultimate hybrid between Zero Camber and Reverse Camber to allow you to have the most playful yet stable ride for easy progression and all-mountain domination. The profile of choice for park, freestyle, and urban riders worldwide.

Gullwing Rocker:

A hybrid Camber/Rocker profile in a league of it's own, Gullwing offers the best of both worlds for the All-Mountain Destroyer. The Positive Camber under each foot supplies riders with the response they know and love while the Reverse Camber Profile in the center allows you to experience unparalleled float in the Powder, as well as superb press-ability in the Park. This Do-It-All design allows you to have a Quiver of one and ride the whole Mountain like a Terrain Park.

NITRO Snowboard Tech

Sidecuts

RADIAL SIDECUT

The simplest and most common of all sidecuts: One single radius makes this sidecut extremely versatile and predictable.

DUAL / TRI PROGRESSIVE SIDECUT:

Tighter radius towards tip and tail improve control, acceleration and grip. Combined with a mellower tip and tail flex, these sidecuts give Eero Ettala and Sven Thorgren just the right amount of control they're looking for.

DUAL DEGRESSIVE SIDECUT:

This sidecut blends a smaller radius in the center with two larger ones in the tip and tail, making it loose and playful. The most forgiving of our sidecuts.

PROGRESSIVE SIDECUT

A larger radius in the front, blended into a tighter one towards the tail. The progressive sidecut makes accelerating out of turns a breeze, while maintaining a catch-free nose area.

Base Materials

**PREMIUM EXTRUDED FH BASE:
EASY AND VERSATILE**

Durability, speed and low maintenance all in one ultra clear base material - our FH Base takes the abuse of rail and urban riding like no other.

**SINTERED SPEED FORMULA II:
FASTEST AND DURABLE**

Rocket science put to work! A nanotech wax formula deeply infused into our sintered base material makes the base surface lightening fast in all snow conditions. Highly tuned yet extremely durable, SPEED FORMULA II base technology is exclusively featured on Nitro high-end boards.

**SINTERED SPEED FORMULA BASE:
HIGH DENSITY - HIGH DURABILITY**

Utilizing a new base material compound, we have been able to achieve higher abrasion resistance, increased wax absorption and higher on-snow speeds.

NITRO Snowboard Tech

Laminates

BI-LITE LAMINATES: FORGIVING AND STRONG
Our rider-trusted Bi-Lite Laminates are engineered for unrivaled strength, powerful style and refined board-feel.

TRI-LITE LAMINATES: RESPONSIVE AND BALANCED
The perfect blend of flex and torsion control, Nitro-tuned Tri-Lite Laminates with fibers running in 3 directions make for quick turning, highly responsive boards.

DIAMOND LAMINATES: ULTRALIGHT AND POWERFUL
Well-balanced layers of carbon fiber establish a new level in performance. More snap and liveliness provide a smooth, powerful and effortless ride.

DIAMOND BAND
Carbon reinforcement fibers are ultra strong yet lightweight. Tip-to-tail stringers transfer rider's input to help you drive your board and stay in control.

Core Profiles

REFLEX CORE PROFILE: ENHANCED PROFILE CONTROL
A thinner core profile between your feet improves handling and increases torsional flex, allowing you to steer your board through a turn with ease.

WHIPLASH CORE PROFILE: MAXIMUM OLLIE POWER
This profile features reduced thickness between the inserts with added meat outside your feet for maximum ollie power, while maintaining a perfect press flex.

NITRO Snowboard Tech

Flex Profiles

URBAN: SMOOTH AND LOOSE
These ultra flexible boards can be tweaked any way you like, from rails to butter tricks, and they won't wash out on you.

ALL TERRAIN: ALL MOUNTAIN POP
Our most versatile flex pattern, combining Nitro's signature pop with smooth response, allowing you to tear up the entire mountain.

PARK: TUNED FOR PROGRESSION
Specifically tuned for park riding, this flex pattern is forgiving yet responsive; allowing you to take your riding to the next level on jumps and rails.

MOUNTAIN: SPEED AND POWER
With maximum response and drive for fast, all-mountain riding, this snappy flex pattern creates powerful boards for powerful riders.

NITRO exclusive TECH FEATURES

SOFRIDE FLEX
An Nitro exclusive construction: Spider web-like binding raisers allow us to make sweet soft-flexing boards for young shredders while respecting all required standards for binding insert depth and pullout strength. Featured on smaller Ripper and Muse sizes.

PROGRESSIVE WIDTH
The progressive width is an exclusive feature on the Überspoon and Slash. Starting out with a medium width profile at the smallest size, these boards get progressively wider as they go up in size, ensuring an ideal board-to-boot match and a perfectly balanced board for riders of every size.

HIKE PODS
Featured exclusively on our Doppelganger split board, the new Hike Pods are specifically designed to add grip under the bindings in hiking mode, making those icy traverses just a bit more fun.

OLD! ASYMMETRICAL TWIN SHAPE
A Nitro original invention: already 25 years ago, we figured out that the body's ability to lean into a turn is different between toe- and heelside. So we designed the Asymmetrical Twin, a board that has a deeper heelside sidecut to compensate for the human body's inability to bend the knees in both ways :-). The Diablo model is a modern interpretation in shape, construction and flex of the two asymmetrical twin boards offered back in the day.

MEN'S *Freeriding*

The True Essence Of Snowboarding

These boards were designed to take advantage of any marked or unmarked trail in your path. With an array of camber profiles, flexes, shapes, and edge technology to provide anyone, looking to shred the mountain their own way, with a board so fitting to their riding style it feels customized. From the lightest board we make, the Highlander, to the most affordable splitboard on the market, the Nomad, we have focused on riders who ride the mountain with no regard to marked trails - for the snowboarders that go where they want to go, whenever they want.

163 NUAT

Non-Un-Asymmetrical Twin

Designed For Mountain Surfing

Characteristics

AMAZING SHAPE - CAM-OUT CAMBER - MID-WIDE WIDTH
ALL TERRAIN FLEX - PROGRESSIVE SIDECUT

Special Features

POWERCORE II - BI-LITE LAMINATES
SINTERED SPEED FORMULA HD BASE

Description

This new, fun, surf-inspired shape utilizes classic surfboard "wings" on the tip and tail for faster turns and maneuvering through the trees. The extreme pintail will allow you to whip turns and throw up mind-blowing sprays quicker than any other board on the market. The shape and Cam-Out Camber is designed to give you the ultimate surf feel while riding down any mountain, without sacrificing the needed support and response for getting out of tricky situations. Once you take one run on the NUAT (Non-Un-Asymmetrical Twin) you will never see the mountain the same – every turn is sweeter than the last!

MEN'S
All Terrain
 For those who see the whole mountain
 as their playground

All Terrain snowboards can handle any type of terrain you dig into – that is what they were designed to do. From the groomers, to waist deep powder slashes, to all day park laps, these boards were specifically constructed to give you the stability, flex, and response you need for whatever you feel like riding on any given day. The boards within the All Terrain category vary in flex, shape, and camber profile to allow you to choose the one that is a perfect match for your riding style and needs. From the bad-ass and responsive Blacklight board, to the return of the beloved aym Diablo, to the do-it-all Team board, to the more forgiving Cinema our All Terrain snowboard category has something for everyone.

elias elhardt

"I love the Überspoon, it's the only board I ride. Throughout the past two years we've constantly been tuning the flex, shape and camber. Now it's ready! An amazing playful board which I like to ride in every terrain, especially in powder!! It feels light as a feather and that's how we came up with this year's graphic design. We've taken pictures of bird feathers and wings. Then my roommate Ander placed it all together to create the final graphic. Thank you buddy. Hope you guys also like it! — Greetings."

LORENZ HOLDER

I grew up in Munich, close to the Bavarian mountains. Those mountains have always played a major role in my life. I was a semi-professional snowboarder back in the day, until I injured myself badly and I pretty much had to quit snowboarding for a whole season in 2003. In that time I discovered the pleasure of photography for myself.

I was fascinated by photos that could describe a whole scene, a whole story or even a whole day, in just one small moment caught on film. This fascination was one of the biggest motivations for me to start my career as a professional photographer.

In my photos I like to show the viewers a different angle, something they normally wouldn't notice, even if they were there at the scene. I might use colorful flashes, different camera angles or tilt and shift lenses - always trying to capture something a bit different. On the other hand, I also love the documentary style; simple black and white documentary is something very real.

SAM TAXWOOD

"The Team snowboard has been my favorite board in the line for years because it gives you the pop and snap you need for the park & pipes, but it also tips turns in any snow condition the mountain has to offer! It is the ultimate all-mountain freestyle board!"

NEW

PRO ONE-OFF

For The Ones That Ride It All

Characteristics

DIRECTIONAL TWIN SHAPE - TRUE CAMBER
STANDARD WIDTH - ALL TERRAIN FLEX
DUAL DEGRESSIVE SIDECLUT

Special Features

POWERLITE CORE - REFLEX CORE PROFILE - BI-LITE LAMINATES
SINTERED SPEED FORMULA HD BASE

NEW

SMP

Shaped For Good Times

Characteristics

DIRECTIONAL SHAPE - CAM-OUT CAMBER - MID-WIDE WIDTH
ALL TERRAIN FLEX - RADIAL SIDECUT

Special Features

POWERCORE - BI-LITE LAMINATES
PREMIUM EXTRUDED FH BASE

Description

The new SMP board was shaped and developed to give you the ammunition to annihilate anything in your path. The shape, flex, and deep sidecut allow you to descend the steepest or flattest of faces with style and finesse. The Cam-Out Camber will allow you to charge the steepest of runs with ease, while the early rise in the nose and tail will offer a surf-like float. Available at a very affordable price so everyone can enjoy this beautiful all-mountain, directional surf inspired, old school mountain slayer.

STEVEN STONE

I was born in Sheridan, Wyoming, but I've been based out of Salt Lake City for a long time now.

I'm an editorial and lifestyle photographer who occasionally dabbles in fashion. I love cats and whiskey. I hate New York City. I need to constantly be working on something and have a tendency to bite off more than I can chew. I spend the bulk of my money trying to make my motorcycle faster than it is right now. I just took up cooking and it's my current obsession. My puppy, Jackson Alabama, is perfect.

BRYAN FOX

„The new SMP model is built for the type of riding I truly enjoy.... All mountain blended with a heavy dose of freestyle. Built with speed in mind.“

The graphic is strongly influenced by the high desert town I grew up in - Ramona, California. We would see tons of rattlesnakes when I was a kid exploring the open spaces around my childhood home. The rattlesnake is really interesting to me, completely mellow, sun tanning all day, minding its own business, but also not to be fucked with, ready to kill at any moment.*

- BRYAN FOX

Bryan Fox has done it all in snowboarding from full street video parts, to AK freestyle lines, to making his own movies, to competing in SuperNatural, therefore when Bryan says he wants a Pro One Off Graphic, he knows exactly what board he wants it on. He wants a board that can do it all and handle the speed you need to look like a bad ass.

CINEMA

Smooth Progression

Characteristics

TWIN SHAPE - GULLWING ROCKER - PROGRESSIVE WIDTH
PARK FLEX - RADIAL SIDECUT

Special Features

POWERCORE II - BI-LITE LAMINATES
PREMIUM EXTRUDED FH BASE

Description

Created to provide smooth and effortless progression from the groomers to the park. The Cinema offers a softer, more forgiving ride down the mountain with it's Gullwing Rocker and Park Flex. Developed to be the perfect affordable park progression stick for riders looking to improve their presses, butters, spins, and flips (if you want to get crazy). This shred stick allows our team riders to quickly learn new tricks in the park, while offering enough forgiveness for beginners to easily learn how to link turns on the groomers. Progression does not have to be difficult.
