

NITRO SNOWBOARD COMPANY

2017 - 2018

BOOTS

With our new 17/18 Nitro Snowboard boot collection we have focused on making boots that are equipped with groundbreaking innovation, performance, and lightweight construction, while offering convenient customizable solutions that allow any level of rider to enjoy full days on the mountain in comfort year after year. This year we have upgraded every model, added new features, and new and improved Cloud Liners. It's a new season; filled with new innovations, boot models, and comfortable performance technologies, with the trusted reliability and durability that Nitro has always offered for decades.

Tommy Delago

Founder & President of Nitro Snowboards

NITRO BOOT DIVISION

TECHNOLOGY FOCUS

RE/LACE LINER LOCKER

Another innovation from your friendly developers at Nitro: The RE/LACE Liner Locker provides easy adjustability of your inner boot lacing when your boot shell is already tightened (tied), by just pulling up on the lace handle. This allows you to (re)tighten your liner and foothold throughout the day (on and off the chairlift) without having to untie your boot.

TLS 5 LACING SYSTEM

TLS 5 Twin Lacing System

Nitro leading the pack with the TLS 5 lacing system: Easy lace engagement and release, combined with the low abrasion of our Dyneema® laces are the key factors of this highly reliable zonal lacing system. At the same time, the TLS 5 features compact size and low weight while maintaining the reliability proven by tens of thousands of days on the mountain. Even though rarely needed, servicing and replacement of all parts including the lace is easier than with any other system on the market. Even using a standard lace if you're in a pinch is an option only available on Nitro's TLS boots. Easy-entry handle storage pockets as well as our Bail Out system for an easier entry and exit round off the most developed dual lacing system on the market.

VIBRAM® OUTSOLE MADE OF ICETREK VIBRAM® COMPOUND AND D3O® DAMPENING

Developed to provide improved grip on icy and snow surfaces, enhanced with supreme dampening properties of a D3O® dampening pad. VIBRAM® ICETREK COMPOUND allows you to move freely and safely in cold climates, while the D3O® material provides the shock absorption and dampening you need for any conditions or riding styles. VIBRAM® ICETREK COMPOUND is usable in all seasons, it represents the best solution for everyday condition encountered from the Equator to the North Pole. The softness allows the compound to adhere to smooth surfaces and our advanced sole design utilizes small pointed lugs and a large supporting surface for improved traction and durability.

12

1 MOLDED TLS LACE HANDLES

Our molded TLS lace handles provide better grip and comfort for more lacing power

2 ILS (INTERNAL LACING SYSTEM)

Our ILS system features a lacing harness firmly connected to the boot shell. This harness snugly wraps around the liner, securing it in the shell and providing precise lacing and fit. Our engineered ILS laces provide less friction and a Dyneema® core for added strength.

3 FLEX LINK

A flexible panel between upper and lower shell ensures an even flexing, responsive boot without bulk.

4 ARMORED SPINE

We are using an anatomically shaped and 3D molded heel reinforcement to provide even boot flex and long-lasting heel fit.

5 AIR DAMPENING

Our trusted AIR suspension technology is now featured on even more models. The best shock absorbing technology on the planet sucks up hard landings and keeps your heels from getting bruised. This noticeable difference in ride and comfort does not compromise response or control.

6 ORTHOLITE FOOTBEDS

Together with OrthoLite, the World's Leading Supplier of Open-Cell Foam Insole Technology, we have developed new footbeds in dual and triple density versions for different levels of support and comfort: OrthoLite compresses less than 5% with excellent levels of shock absorption and energy return. Fit and comfort inside the boot will remain consistent for the life of the OrthoLite product. The unique open cell structure of OrthoLite also creates a moisture management system inside the boot by moving moisture away from the foot leaving foot drier. When the foot is removed from the shoe any remaining moisture dries very quickly due to the airflow allowed by the open cell network in the foam. OrthoLite contains a patented anti-microbial formulation to fight fungus, bacteria, and odor. The biocide is added during formulation so that it is linked to the foam and will not wear off or lose effectiveness over time. The Aegis anti-microbial treatment is EPA and FDA approved. OrthoLite is extremely lightweight providing optimum performance and without adding excess weight to the boot. OrthoLite is completely washable and will not hydrolyze. Just throw them in your washing machine and they come out like new.

7 THERMINATOR SHIELD

This thermal layer between sole and liner will reflect your body heat and keep your feet warm all day.

8 BAIL OUT SYSTEM

Designed to make unlacing the TLS system even easier. This pull tab that is placed in the middle of the TLS lacing system on the outside of the boot allows for effortless unlacing and recording breaking speeds for taking your boots off.

9 RE/LACE LINER LOCKER

Another innovation from your friendly developers at Nitro: The RE/LACE Liner Locker provides easy adjustability of your inner boot lacing when your boot shell is already tightened (tied), by just pulling up on the lace handle. This allows you to (re)tighten your liner and foothold throughout the day (on and off the chairlift) without having to untie your boot.

10 TLS 5 Twin Lacing System

Nitro leading the pack with the TLS 5 lacing system: Easy lace engagement and release, combined with the low abrasion of our Dyneema® laces are the key factors of this highly reliable zonal lacing system. At the same time, the TLS 5 features compact size and low weight while maintaining the reliability proven by tens of thousands of days on the mountain. Even though rarely needed, servicing and replacement of all parts including the lace is easier than with any other system on the market. Even using a standard lace if you're in a pinch is an option only available on Nitro's TLS boots. Easy-entry handle storage pockets as well as our Bail Out system for an easier entry and exit round off the most developed dual lacing system on the market.

11 VIBRAM® ICETREK COMPOUND

Developed to provide improved grip on icy and snow surfaces, the VIBRAM® ICETREK compound allows you to move freely and safely in cold climates. VIBRAM® ICETREK compound will not scratch or damage interior floors or absorb liquids or dirt, while offering grip and traction on icy surfaces. Usable in all seasons, it represents the best solution for every condition encountered from the Equator to the North Pole. The softness allows the compound to adhere to smooth surfaces and our advanced sole design utilizes small pointed lugs and a large supporting surface for improved traction and durability.

12 D3O TECHNOLOGY

D3O is a smart material that moves slowly and increases comfort when in a normal state, but when shock or impact is increased the materials lock together to absorb and disperse energy created upon impact, before instantly returning to its flexible state. What this means is that the material increases overall comfort of the liner by absorbing impact from deep landings or choppy snow conditions – allowing you to go faster and deeper all day!

Boot Tech / Not shown

LINER HEAT MOLDABILITY

Our Cloud Liners are constructed from Thermacell material, using Nitro specific casts and our signature Latex Heel Pads. This ensures long lasting fit and comfort without fatigue. While this is not necessary, all our liners can be thermo-molded for an even more custom fit. Specific heating system and tools are available.

RUBBER IMPACT PANELS

Selected EVA outsoles are reinforced with strategically placed rubber reinforcements for added resistance.

DLS (DIRECT LACING SYSTEM)

Directly connected to the liner, the DLS also features Dyneema® loaded low-friction laces on selected models for ultimate fit and comfort.

POWER TONGUE STIFFENER

For those looking for adjustable stiffness throughout the day or season, you can use our removable tongue stiffener to change between premium precision or more of a relaxed feel. From the steep and deep to the groomers you can customize your boot feel perfectly for your personal style.

EVA OUTSOLE

To reduce weight even more, we are using full EVA outsoles on selected models. While keeping weight low, the EVA also provides great impact absorption and thermal insulation

INTERLOCK SYSTEM

Developed to help keep the liner heel in one place and eliminate any kind of heel slippage or lifting. This ladder unit helps connect the liner heel to the shell to help generated the world's best foothold. Say goodbye to heel slipping and hello to all day comfort and foothold.

RUBBER OUTSOLE

A highly effective traction pattern, combined with an abrasion resistant high-grip rubber compound provides perfect grip, no matter if you're hiking up the park or down the stairs to the bathroom.

Next level innovation and technical performance to create the most comfortable snowboard boot ever, to allow you to charge the entire mountain with ease and confidence.

As our most comfortable high/end performance boot, the Nitro El Mejor provides the latest and greatest in boot technology with a fit so comfortable you will never want to take them off. The VIBRAM® OUTSOLE made of ICETREK VIBRAM® COMPOUND with D3O® SHOCK ABSORPTION combines world renowned durability and traction with a zero pressure point solution for walking from the car all the way to the peak. The FLEX LINK DESIGN together with the AIR DAMPENING and ORTHOLITE® TRIPLE DENSITY FOOTBED offers the comfort and cushioning you need to charge from open to way past close. Our RE/LACE LINER LOCKER keeps your foot nice and snug, but also allows you to retighten your boot on the chairlift in the afternoon without having to unlace your shell. The El Mejor has proven to be the most comfortable performance snowboard boot on the hill - World-class performance, with laid-back comfort!

8/9

1 Soft & Playful

Stiff & Responsive 10

Our most responsive and customizable boot ever provides the latest technologies and user-friendly adjustments you need to adjust your boot on the fly to let you charge harder than ever.

Our highest performance snowboard boot, the Nitro Select TLS, is equipped with ground-breaking science and technical innovation to provide the support, response, warmth, and reliability you demand when you need to carve deeper, go bigger, and ride faster. This year we have redesigned the Select TLS boot, with a VIBRAM® OUTSOLE made of ICETREK VIBRAM® COMPOUND with D3O® SHOCK ABSORPTION for additional foothold, durability, and maximum comfort. The combination of the ARMORED SPINE and POWER TONGUE STIFFENER create the perfect amount of response you need to push your riding to the next level. The TLS 5 TWIN LACING SYSTEM allows you to get in and out of your boot under a minute, but the RE/LACE LINER LOCKER allows you to get that afternoon retighten if needed on the chairlift without even having to undo the TLS system. A boot full of technical mastery should also be easy to use - and the Select is.

Created to be the perfect boot for today's groms looking for progression focused performance to help them become tomorrow's pros, in an easy to use package.

The Rover is dedicated to make snowboarding days better, by offering a user-friendly speed lacing solution, our new RE/LACE Lacing System. The Re/lace Lacing System is easier and quicker to use than anything else out there, which allows any kid to effortlessly become the independent all-mountain ripper they want to be. The Power Strap allows for customizable response and control, while the EVA Footbed offers high-end cushioning and keeps the boots weight at a minimum. The Nitro Rover RE/LACE provides easy to use technologies and a world-class fit, for all day shredding!
