关于降噪功能
About Active Noice Cancellation

The Active Noise Cancellation module senses the external environment noise through
the built-in microphone, and produces a sound with the same intensity but opposite
direction to offset the environment noise.
The noise reduction effect may not be obvious in very quiet environment, or some
noise may be heard.
The noise reduction function is mainly used for the noise in the low frequency band.
Although the noise is reduced, it will not be completely eliminated.
Depending on the way you wear the earphone, the noise reduction effect may be
different or a tone may sound. If this happens, please remove the earphone and
put it on again.
Do not cover the microphone with hands or other objects, which may affect the
normal operation of noise reduction function or ambient sound mode.

降噪功能通过内置麦克风感测到外部环境噪音，并产生强度相当但方向相反的声音
来抵消环境噪音。
降噪效果在很安静的环境下可能不明显，或可能听到一些噪音。
降噪功能主要用于低频率波段中的噪音，尽管噪音减少，但不会完全消除。
视佩戴本机的方式而定，降噪效果可能会有所不同或可能发出提示音，如果发生这
种情况，请取下本机后再次戴上。
请勿用手或其他物体盖住本机的麦克风，这样会影响降噪功能或环境音模式的正常
运作。
